MOTUL

Motul - Technical specifications

When you choose a Graf gearbox, you know you're getting quality, expertise and durability. Our goal is to always reach the highest possible level of performance, and for this, it is essential to have a lubricant specifically designed for each application.

Thanks to the strategic alliance between Graf and Motul we can say that today we have the best lubricant in the world in each of our transmissions.

Motul is a company with a long history in motorsport, not only as a component in racing projects but also as a fundamental part of new and custom developments for the most demanding racing events in the world.

It is because of these qualities that in countless race categories, from Dakar to MOTO GP, Motul is the gear oil of choice.

Different transmissions require different care, depending on the application. For example, for street racing with synchronized gears it is recommended to replace the oil every 6,000 miles. On the other hand, full racing transmissions require an oil change after each event, in order to inspect the oil to make sure there are no residues.

**Below you can see a brief indicative table of the application for each product, if you have any questions, do not hesitate to contact our technical department:*

MOTUL OIL FINDER	Motul Gear 300 75W-90	Motul Gear Competition 300 75w-140	Motul Gear FF LSD Type 2 75W-90
